NEEDS AND USES: The aim of this study is to assist in the adaptation of an existing web-based sexual assault prevention program for college men and women, for use among the Navy population. To achieve this aim, data will be collected in several ways and respondents will participate in only one type of data collection. First, responses to a normative survey will provide information about the behavior and attitudes of Sailors regarding alcohol use and sexual assault. Next, focus groups and interviews will be conducted to obtain feedback about the content of the intervention and ways to adapt it for Sailors. Interviewees and focus group respondents will be selected based on their drinking habits, which will be determined by a brief pre-interview/focus group survey. All data are anonymous, meaning that there is no way for us to match any personally identifiable information of any participant to their survey responses. After

interview/focus group completion, a post-interview/focus group survey will be given to obtain non-personally-identifiable demographic and alcohol use information to be used as descriptive information, as well as data from standardized measures that assess respondents' opinions of the existing intervention. All surveys will be completed via a HIPAA compliant software. Data from these surveys will be incorporated into the intervention content and will help generate an adapted prototype of the sexual assault prevention program (+Change) for Sailors.

The results of these surveys will impact the Department of the Navy by documenting the feasibility, acceptability, satisfaction, and utility of a multi-pronged, individually tailored, and easily distributed prevention program that addresses the large problem of sexual assault, and the associated effects of alcohol for Sailors. In the long-term, this research benefits the readiness of the force by producing an easily disseminated high-quality sexual assault prevention program that can be implemented in multiple military settings and sustain evaluation in a larger clinical trial. This research can also have a secondary impact on reducing hazardous alcohol use among service members and can prevent the occurrence of alcohol use problems and associated negative health sequelae in service members. These long-term objectives are consistent with both DoD and the national public health priorities.
